## **NO GLYPHOSATE IN HOFBRÄU MÜNCHEN BEER**

Statement from Quality Control Management and the director of Hofbräu München:

Since years Hofbräu München gets its raw materials and beers continuously examined and tested by the Research Center Weihenstephan for Brewing and Food Quality regarding the existence and/or concentration of heavy metals, Mykotoxins, polychlorite Dibenzodioxins and several hundreds of pesticides in its raw materials.

The results were without exception immaculate.

Based on actual press releases, Hofbräu München initiated in addition to already existing results further analysis at the bavarian analytical service center of the laboratory at Friedle GmbH.

**Glyphosate was never detected in any of the laboratory analysis of our products.**
